(54) Title: A METHOD FOR MEASURING DIMENSIONS BY MEANS OF A DIGITAL CAMERA

(57) Abstract: The distance between a first detectable point (5) and a second detectable point (6) on an object (2) is measured by means of a digital camera (1) by making a first image (7) comprising said first detectable point (5), then displacing the camera (1), and subsequently making an other image (8) comprising said second detectable point (6). The coordinates of the detectable points (5, 6) on the images (7,8) are calculated. Two or more overlapping images (7, 8) are made by the camera (1), whereupon corresponding detectable points (C) in the overlapping part (9) of overlapping images (7, 8) are detected in order to determine the displacement of the camera (1).
